

WORK EXPERIENCE

Front-End Developer Intern — E-Commerce Website Project Dec 2025 – Mar 2026

- Developed and implemented responsive user interfaces for an e-commerce platform, ensuring consistent layout and functionality across desktop and mobile devices.
- Built new features based on team and stakeholder requirements, from UI components to interactive elements.
- Designed and integrated custom icons and visual assets to improve interface clarity and overall user experience.
- Documented each development task and presented progress during team meetings also updated task status to "Completed" upon stakeholder approval, maintaining a clear record of project progress.

TECHNICAL SKILLS

- Languages: HTML, CSS, JavaScript, TypeScript, PHP, Dart, C#, C++, Python, Java
- Frameworks & Libraries: React, Next.js, Node.js, Tailwind CSS, Bootstrap, Flutter, OpenCart (Twig), Django
- Databases: MySQL, SQLite, PostgreSQL, Supabase, Firebase
- Tools: Git, GitHub, Vercel, VS Code
- APIs: REST API Integration, OpenAI API

PROJECTS

Café Crème – Coffee Shop Ordering & Management System 2024

HTML, CSS, JavaScript, PHP, MySQL

- Built a full-featured ordering and management web app with separate customer and admin interfaces.
- Customer side: browse the menu, fully customize drinks, and place orders online.
- Admin side: Point-of-Sale (POS) system, inventory management, product management, stock tracking, and a top-selling-items dashboard.
- Added adjustable UI theming (background color customization) and data filtering across all major modules for faster searching and reporting.

FireQuake Escape — Disaster Preparedness Training Game (Capstone Project) 2025

HTML, CSS, JavaScript, PHP, MySQL, Tailwind CSS, Bootstrap

- Built the web platform and admin panel for a disaster-response capstone combining a 3D mobile game with a companion website.
- Mobile component, built by teammates, modeled the BSU campus in Blender for a 3D fire and earthquake escape simulation.
- Implemented role-based accounts — Admin, Staff, and Student — each with tailored access to section and performance data.
- Automated performance tracking for 200+ students and added data filtering platform-wide, improving evaluation efficiency by 100%.

TaskFlow — AI-Assisted Task & Note Management Web App 2026

Next.js, React, TypeScript, Node.js, Supabase, OpenAI API

- Built a task management app that organizes notes into custom sections, with tasks added under each one.
- Implemented fuzzy-matching duplicate detection to flag similar task titles even with typos, plus an AI-powered title-improvement suggestion feature.
- Added voice-to-text input for task creation, due-date scheduling with automatic color-coded urgency indicators, and a completion checkbox.
- Integrated an AI assistant that scans all sections and tasks to surface the one closest to its deadline, alongside filtering tools for managing large task lists.

Pocketra — Personal Budget & Wallet Management App 2026

Flutter, Dart, Firebase

- Developed a finance app that lets users virtually divide their total balance into custom "sections" (sub-wallets) for specific purposes, e.g., setting aside a fixed allowance while it stays part of the overall balance.
- Enabled users to log expenses per section and track real-time totals for remaining balance and total amount spent.

EDUCATION

Bulacan State University Bustos Campus 2022 – 2026

- Bachelor of Science in Information Technology
- Specialization: Web and Mobile Application Development
- Awarded Best Capstone Project
